Crime Data Definitions

VARIABLE NAME	DEFINITION
LSOA	Lower Super Output Area Code (2011)
NAME	LSOA Name
AVERAGE_CRIME	Crime of Violence against the Person, averaged for the last 24months
POPULATION	Estimate of the mid-2018 LSOA Population
RATE_per_1000	The Average crime figure converted to a rate per 1000 persons.

The crime data are taken from the "Recorded Crime: Geographical Breakdown"

https://data.london.gov.uk/dataset/recorded_crime_summary

The Data are the most up to date data covering the last available 24 months at the Lower Super Output Level.

The data have been subset to exclude all EXCEPT "**Violence Against the Person**" this includes: Homicide / Violence with Injury / Violence without Injury.

and consists of a range of offences from minor offences such as harassment and common assault,
to serious offences such as murder, actual bodily harm and grievous bodily harm.

The data were not subset further to avoid small numbers for certain LSOA areas.

The data were summed to provide a single number for each LSOA.

The City of London police data had to be assembled separately and added to the data as they were not available as part of the

downloadable data set.

The Crime data, the Deprivation data, the Census and London Atlas data have been assembled for a consistent set of geographical areas. (the London 2011 LSOAs)
